

CHART a healthy climate future

Climate and Health Pilot Grants Available

Letter of Intent Due: February 24th, 2025 (Extended)

Full Application Due: April 14th, 2025

The Climate and Health Actionable Research and Translation (CHART) Center (NIH 1P20ES036110-02) is pleased to announce the 2025-2026 *Pilot Project Program in Climate and Health*. CHART will make available a total of \$60,000 to projects that aim to advance climate and health research, with the intention of funding multiple grants of up to \$20,000 each in direct costs.

The Pilot Project Program aims to build the capacity of investigators by providing funding for innovative pilot proposals that plan to generate new knowledge about the health risks associated with climate change in urban areas, particularly those related to heat exposure, and to translate this knowledge into action through equitable partnerships that enhance health. Prioritization will be given to early-stage investigators, minority-serving institutions, and historically underrepresented institutions seeking to extend their research program into the field of climate and health.

The central goal of CHART is to build the capacity of investigators to successfully compete for National Institute of Environmental Health Sciences (NIEHS)-funded R-level research awards. It is important for pilot applicants to consider the [research priorities of NIEHS](#) in their pilot project plans as well as alignment with CHART goals.

The Pilot Project Program has the potential to advance the activities of the [CHART Community Engagement Core](#) and intends that at least one grant be awarded to a community-engaged research project.
